Hiring Committee
Corcept
Redwood City, California

Dear Hiring Manager,

I am writing to apply for the Biometrics Intern position at Corcept. I am a graduate student in Mathematical Sciences (Statistics concentration) at Georgia Southern University with hands-on experience in clinical trials, biometrics workflows, and biomedical data analysis. Corcept's pioneering work in cortisol modulation and its strong emphasis on rigorous, data-driven clinical research strongly align with my academic training and professional goals.

During my role as a Junior Statistician at the Centre for Clinical Trials, Research and Implementation Science, I supported biometrics activities for maternal-health clinical trials funded by the Bill & Melinda Gates Foundation. I contributed to statistical analysis plans, performed sample size calculations, developed randomization strategies, and built validated R programs for cluster-randomized trial workflows. I also developed REDCap-to-R pipelines for data cleaning, preprocessing, validation, and quality control across multiple clinical sites, collaborating closely with statisticians, clinical data managers, clinicians, and epidemiologists to ensure data integrity and CDISC-aware datasets. This experience provided me with a strong foundation in cross-functional biometrics collaboration, directly aligning with the responsibilities of this role.

In addition, as a Research Trainee at the Clonal Redesign Lab at Moffitt Cancer Center, I conducted statistical analyses and large-scale simulation studies in R to evaluate genomic variability and treatment response in oncology datasets. I routinely generated clear analytical reports and publication-quality visualizations using ggplot2, Shiny, and reproducible workflows, and presented findings to multidisciplinary research teams. This experience strengthened my ability to communicate complex statistical results clearly to diverse scientific stakeholders.

I am proficient in R and Python for data manipulation, statistical modeling, and visualization, with a solid grounding in regression modeling, survival analysis, Bayesian methods, and mixed-effects models. I bring strong attention to detail, a collaborative mindset, and a genuine eagerness to learn industry standards, data practices, and emerging statistical methodologies within a biometrics environment.

I am authorized to work full-time in the United States and available for a full-time, on-site internship at Corcept's Redwood City office for the duration of the summer program. I would welcome the opportunity to contribute to Corcept's biometrics team while gaining industry experience at the forefront of innovative therapeutic development.

Thank you for your time and consideration. I look forward to the opportunity to discuss my candidacy further.

Sincerely,
Daniel Olofin
