Hiring Committee
Corcept Therapeutics,
Redwood City, California

Dear Hiring Manager,

I am writing to express my strong interest in the Statistical Intern position at Corcept. I am currently pursuing a master's degree in mathematical sciences with a concentration in Statistics at Georgia Southern University, and I am highly motivated to apply my training in statistical analysis, data quality control, and reproducible research to support Corcept's mission of advancing cortisol modulation for patients with serious unmet medical needs.

Corcept's focus on rigorous science translated into impactful therapies strongly resonates with my academic and professional background. The opportunity to contribute to biometrics-driven drug development, while collaborating across statistics, clinical data management, and statistical programming teams, is particularly exciting to me. I am eager to gain hands-on industry experience in an environment that values methodological rigor, data integrity, and cross-functional collaboration.

Previously, I worked as a Junior Statistician at the Centre for Clinical Trials, Research and Implementation Science, where I supported statistical activities for maternal-health clinical trials funded by the Bill & Melinda Gates Foundation. In this role, I contributed to statistical analysis plans, performed sample size calculations, and developed randomization strategies for cluster-randomized trials. I also co-built REDCap-to-R data pipelines for data cleaning, preprocessing, validation, and quality control across multiple clinical sites, collaborating closely with statisticians, clinical data managers, epidemiologists, and clinicians to ensure accurate and reliable analysis datasets. These experiences closely align with Corcept's emphasis on high-quality source and derived data.

In addition, as a Research Trainee at the Clonal Redesign Lab at Moffitt Cancer Center, I conducted statistical analyses and simulation-based experiments in R to study genomic variability and treatment response in oncology research. I assisted in the development and evaluation of statistical models, generated clear graphical summaries and reports using ggplot2 and reproducible workflows, and presented findings to multidisciplinary research teams. This experience strengthened my ability to translate complex statistical results into clear, actionable insights for internal stakeholders.

I am proficient in R and Python for statistical analysis, data manipulation, and visualization, with a strong foundation in regression modeling, survival analysis, Bayesian methods, and experimental design. Beyond technical skills, I bring strong attention to detail, excellent problem-solving abilities, and a collaborative mindset well suited to a dynamic team environment.

I am authorized to work full-time in the United States and available for a full-time, on-site internship at Corcept's Redwood City office for the duration of the summer program. I would welcome the opportunity to contribute to Corcept's statistical team while learning from experienced professionals at the forefront of innovative drug development.

Thank you for your time and consideration. I look forward to the opportunity to further discuss how my background and interests align with Corcept's Statistical Intern role.

Sincerely,
Daniel Olofin
