

Homework Two

Daniel Oluwafemi Olofin

August 29, 2025

- a. Make a section with header “Visualization of trees data”. Under the section header, make a chunk that contains the command `plot(trees)`. Set the chunk options so that the code is not displayed, but the plot is:

b. Make a section with header “Area of a circle”. Under the section header, make a chunk that contains the command `area <- pi * r^2`. Set the chunk options so that the code is displayed, but not evaluated. (Grad student only). Insert the LaTeX code

```
area <- pi * r^2
```

Area of a Circle : $A = \pi r^2$

c. Make a section with header “The great grey beast February”. Under the section header, make a chunk that calculates the number of seconds in the month of February (no leap year) and assigns the value to a variable `seconds`. Set the chunk options so that the code is not displayed, but is evaluated. Write a line of text that states how many seconds are in February, making use of the value of the `seconds` variable

The number of seconds in February is **2419200**.

d. Make a section with header “Tasty dishes”. Consult the RMarkdown cheat sheet and see how to make an ordered list. Create an ordered list with at least three of your favorite food

1. Eba and Efo
2. Fried Rice
3. Dodo and Egg
